Subject: Koraput: Stop-TB Observations

Dear Team,

I am adding the below observations from the field visit based on Local System and Central Database data:

Local System Observations:

1. District data is appearing as **Nicobar Islands** in the 19th June data.
2. Anthropometric data (Weight, BMI, etc.) is being reflected under the Demographic section. Anthropometric data (Weight, BMI, etc.) is being reflected under the Demographic section.
3. **67 Beneficiary IDs** are missing out of **361 records**.

4. **58 beneficiary BP readings** are missing out of **361 records**.
5. **58 household records** are missing out of **361 records**.
6. Duplicate beneficiary records have been identified for the same beneficiary with different BeneficiaryRegIDs. The latest record is mapped with a BeneficiaryID; however, the BeneficiaryID is not being assigned to the corresponding older records of the same beneficiary.

Central Server Observations:

1. Under the Demographic section, the **i_beneficiarymapping** table is not being updated on the Central Server.
2. Camps were conducted only on **18th, 19th, and 20th June**; however, a few transactional tables on the Central Server are also showing data for **21st June**.
3. For **18th June**, **36 records** out of **106 records** are reflecting **Assam geographical details** (State, District, Block, and Village).
4. Data in a few tables is not reflecting correctly and requires validation.

Kindly review the above observations and validate them from your end.

Thanks & Regards,
Venkatesh B.
